MAGINOVA

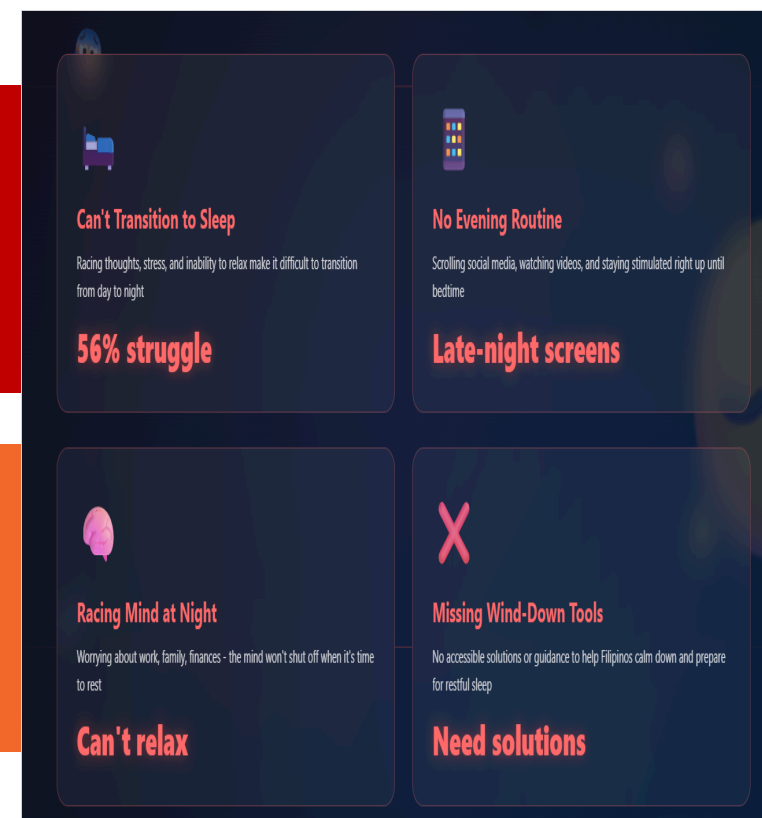

Problem Statement

Problem

Working professionals experience 1-2 hour wind-down periods due to racing thoughts and physical tension, losing sleep nightly.

Impact

Professionals face burnout and poor performance, employers lose productivity and face turnover, organizations see declining output and engagement.

Problem Statement/Industry

Problem Being Solved

Working professionals experience 1-2 hour delays during their wind-down period before sleep because unresolved cognitive arousal from past events, persistent worry about upcoming tasks, and unaddressed physical tension cause sleep loss that affects their energy, focus, and productivity.

Supporting Data

56% of Filipinos sleep under 7 hours daily. Philippines ranks 1st in Southeast Asia for sleep loss.

Problem Analysis

Affected Stakeholders

Working professionals that are establishing their careers with multiple responsibilities,
Employers of young professionals, and
Organizations with affected employees

Impact on Stakeholders

Working Professionals: Higher burnout risk, slower career progression, and missed promotion opportunities.
Employers: lower team productivity, missed deadlines, and reduced output quality.
Organizations: Decreased overall performance and competitiveness

Root Causes

Lack of structured wind-down rituals leads to cognitive hyperarousal through rumination and anticipatory anxiety, and somatic hyperarousal from unaddressed physical tension. High-responsibility lifestyles, poor sleep hygiene, and screen dependency compound these clinically recognized barriers to sleep onset. (Cleveland Clinic, 2024)

Personal/Team Connect

As students, we've spent countless nights staring at the ceiling, knowing we need sleep but unable to shut off our minds. We've watched friends and working professionals waste hours trying to fall asleep, losing precious rest time. We deeply understand this struggle and are determined to help fellow Filipinos wind down effectively and sleep better.

Target Customer Segments

Primary

Working professionals aged 23-45 in Metro Manila earning ₱25,000-50,000 monthly

Secondary

Corporate Wellness Programs / Clinical Sleep Professionals

Jobs-to-be-Done

Functional JTBD

Fall asleep within 20 minutes of lying down (Cleveland Clinic, 2024). Transition from work mode to sleep quickly. Maximize rest hours despite demanding schedules. Organize and schedule tomorrow's tasks before bed. Complete a wind-down routine before sleeping.

Emotional JTBD

Feel mentally clear when going to bed instead of replaying work events. Feel confident about handling tomorrow's workload. Feel in control of evening routine rather than trapped in racing thoughts. Eliminate frustration of lying awake while exhausted. Feel proud of maintaining work-life boundaries. Reduce irritability from sleep deprivation.

Social JTBD

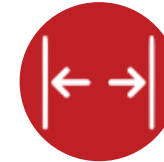

Receive recognition for consistent work performance. Maintain energy for social activities and relationships. Gain respect as someone who manages work-life balance well. Avoid being known as perpetually tired or irritable. Demonstrate to family that health is prioritized despite demanding career demands.

Current Alternatives

Current Alternatives

Primarily push through with willpower, lying in bed longer until sleep comes. Set phone alarms for wind-down reminders. Write to-do lists on paper or notes apps. Attempt YouTube breathing exercises. Force screen avoidance 30 minutes before bed. Keep bedside notebooks for journaling thoughts. Listen to sleep podcasts or white noise.

Gaps in Current Alternatives

Willpower drains mental energy after exhausting workdays. Blank journaling feels overwhelming when exhausted. To-do lists don't provide schedule reassurance. Breathing exercises don't resolve cognitive load. No solution provides a structured, low-effort routine tackling both mental and physical barriers simultaneously.

Our Solution

Solution

Wind-down ecosystem: a cross-platform mobile application with an optional wearable device and in-app access to sleep specialists

Core Technologies/ Methodologies

Flutter, Firebase, ESP32-C3, MPU-6050, MAX30102, DRV2605L, Bluetooth Low Energy

Solution Design

Our Solution

Wind-down ecosystem: a cross-platform mobile application with an optional wearable device and in-app access to sleep specialists

Key Features

Guided journaling, task scheduling, stretches library, voice input, biometric tracking via wearable measuring heart rate and SpO2, in-app specialist booking

Uniqueness

Combines cognitive offload, task planning, and physical tension relief in one app. Optional wearable for biometric data. In-app specialist access absent in all direct competitors

Solution Format:

Mobile app and wearable device

Core Technologies/ Methodologies:

Flutter, Firebase, ESP32-C3, MPU-6050, MAX30102, DRV2605L, Bluetooth Low Energy

Solution Benefits

Functional Benefits

Fall asleep in 20-30 minutes instead of 1-2 hours, gain 1+ hour of sleep nightly, wake refreshed and alert, maintain consistent work productivity, complete tasks without anxiety about tomorrow.

Emotional Benefits

Feel mentally clear at bedtime, confident about tomorrow without anxiety, in control of your routine instead of trapped by racing thoughts, proud of maintaining healthy boundaries.

Social Benefits

Receive manager recognition for consistent performance, maintain energy for social activities, gain peer respect for work-life balance, avoid appearing tired or irritable at work.

Macro Benefits

Improves workforce productivity reducing economic losses, decreases healthcare burden from sleep conditions, lowers workplace burnout and accidents, digital solution minimizes environmental impact.

Macro Analysis

Favourable Trends

AREA	DESCRIPTION
Technology	Metro Manila smartphone adoption at 94% enabling digital health solutions for young professionals.
Social	Growing mental health awareness and workplace wellness prioritization among Filipino professionals.

Unfavourable Trends

AREA	DESCRIPTION
Economy	Economic uncertainty reducing discretionary spending on subscription services among target bracket.
Social	Persistent hustle culture glorifying overwork may conflict with work-life balance messaging.

Back-of-the-Envelope Financial Projections

Currency: Philippine Peso (PHP)

Chosen Business Model: Subscriptions

AREA	YEAR 1	YEAR 2	YEAR 3
Revenues	1800000	4485000	9867000
Total Expenses	600000	710000	1186000
Profit	1200000	3775000	8681000

Prototype

Prototype Format

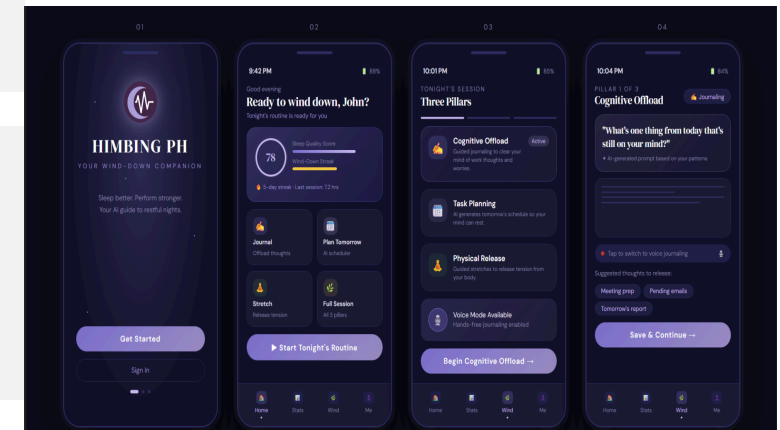

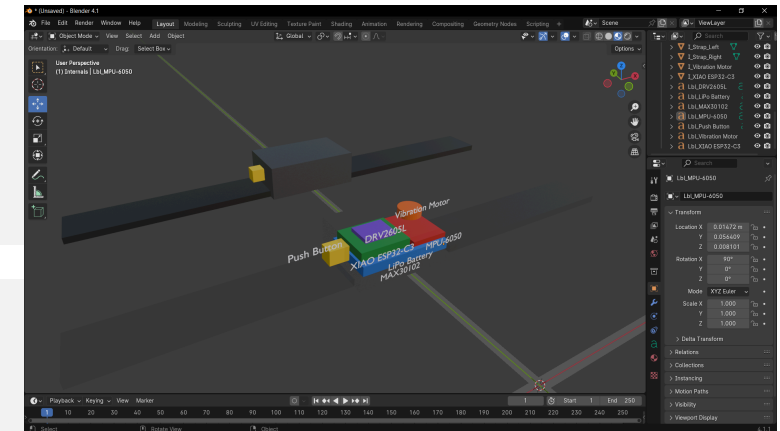

Hybrid prototype: Figma app UI + wearable mockup showing integrated sleep system.

Functionality included in the Prototype

Core features include sleep tracking, guided wind-down routines, personalized insights, and device integration.

Functionality NOT included in the Prototype

Excludes payment system, advanced analytics, AI predictions, doctor consultations, and full hardware functionality.

Prototype Validation

Number of users engaged with?

4

How many people liked or loved the prototype?

2

How many people were either neutral or mostly unhappy with the prototype?

2

Prototype Feedback

What aspects of the prototype did the users LOVE?

Users loved the easy-to-use interface, personalized sleep insights, and guided wind-down routines. They also appreciated the concept of combining a wearable device with the app, as it made sleep tracking feel more accurate and engaging.

What aspects of the prototype were DISLIKED by the users?

Users felt neutral about the device design and wanted it to be more comfortable and discreet. Some found the app features basic. Others were unsure about relying on the system without proven accuracy or real-time results. Users also said that it would be better to integrate the app in existing wearable watches as well.

Competition Analysis

COMPETITOR NAME	TYPE	STRENGTHS	WEAKNESSES
Calm	Direct	Strong brand, easy app	No device, limited tracking
Headspace	Direct	Good UI, strong brand	No hardware, generic content
Fitbit	Direct	Strong hardware, tracking tech	Costly, limited app features
Apple Watch	Direct	Advanced tech, strong brand	Expensive, battery limits

Our Product/Service will be better than the competitors' solutions because:

Hybrid app and wearable system, real-time biometric sleep tracking, and affordable pricing for wider accessibility compared to standalone competitors

Venture Summary

OVERVIEW

Himbing Ph is a wind-down ecosystem combining a cross-platform mobile app with an optional wearable device and in-app sleep specialist access. We help Filipino working professionals fall asleep faster through guided journaling, stretches, and task scheduling.

Mission

To help Filipinos reclaim restful sleep by providing an accessible, structured wind-down companion that addresses both the mental and physical barriers preventing quality sleep, improving overall well-being and productivity

Social/Economic Relevance

The Philippines ranks 1st in Southeast Asia for sleep loss, with 56% sleeping under 7 hours daily. Poor sleep drives burnout, lost productivity, and rising healthcare costs. Solving this protects both individual well-being and national economic output.

Thank You!

To help Filipinos reclaim restful sleep by providing an accessible, structured wind-down companion that addresses both the mental and physical barriers preventing quality sleep, improving overall well-being and productivity
